

Application Security Package

asureSECURE™

Tailored Application Security Coaching & Consultancy to Protect Your Business

The asureSECURE Application Security Package provides a tailored solution that will protect your organization from attacks targeting the web-applications. Through a combination of leading edge coaching and training, in-depth penetration testing, coding reviews and world-class consultancy, the package of services will identify and address immediate vulnerabilities while making sure your business and development teams have the knowledge they require to build security into every application from start to finish.

The Benefits

The application security package will ensure your business and development teams are able to:

- Identify the threats that attack your applications and put your business at risk
- Architect and build secure applications that defend and protect against attacks
- Test for security vulnerabilities and verify that solutions are in place and work
- Seek guidance from world-class experts in the field of application security
- Access fully documented reports, guidelines and procedures tailored to your business

The “90-Day Protect” Package

Over a three month period Declan O’Riordan our world-class security consultant will combine tailored coaching, training and consultancy services with his teams in-depth penetration-testing to ensure your teams understand the security threats, develop the skills required to build self-defending applications and can also test and verify that their solutions work. The 90-day Protect Package includes:

- Five days of application security awareness coaching and training
 - Tailored for the business and IT departments
 - Includes testing reviews and a security assessment
- Five days of penetration testing to identify current vulnerabilities
- Five days of application security coaching and training plus design and coding reviews
 - Design security into your applications Systems Development Life Cycle (SDLC)
- Five-day of additional penetration testing to verify your new security implementation
- On-site consultancy to assess application security progress and target further help
- Remote support throughout the engagement

Additional Services

- Bespoke consultancy for additional guidance, reviews and testing after the project
- Access to our independent penetration testing service

About Declan O’Riordan

Declan O’Riordan is Head of Security Testing at TVS and winner of the prestigious “Best Paper” and “Best Session” awards at this year’s EuroSTAR conference on Software Testing. Declan has worked for both large and small companies and across a broad range of sectors from insurance and banking to retail and government agencies. Declan is well known for speaking on IT security in general and application security in particular and believes it is both possible and essential for project teams to have a working understanding of security.
