

Data Privacy Services

Be Ready for General Data Protection Regulation (GDPR)

The fear over Data Privacy is growing daily as the increase in connected products and the Internet of Things (IoT) means that more of our everyday activities are being tracked, reported and analysed. Companies are seeing the value of big data, capturing increased levels of customer information. But who owns all this data and more importantly is it safe? A recent report by HP highlighted that 70% of IoT devices and sensors examined were susceptible to the top 10 security vulnerabilities in OWASP (Open Web Application Security Project).

The countdown to get compliant for May 2018 has started: the EU's General Data Protection Regulation (GDPR) is the most stringent and burdensome privacy mandate in the world. Companies that operate within the EU now need to take extra precautions to ensure the safety of their data, or face a fine of up to 4% of global turnover. You need to start preparing now to navigate through the complexity involved in addressing GDPR to comply fully with the regulation.

Let the T&VS Data Privacy testing experts help guide you through the challenging data privacy environment and ensure you conform to the latest international regulations.

T&VS Data Privacy Services

- Data privacy testing experts, ensuring safety of valuable IP
- Perform risk / privacy impact assessment
- Detailed knowledge preparing sanitised test data
- Enable compliance to the latest international data privacy laws and regulations
